glass mosaic

EN

Glass is the material mostly known for its perfect reflection, refraction and transmission of light. Historically the oldest types of glass are "silicate glasses" based on silica (silicon dioxide, or quartz), the primary constituent of sand. Sodium glass on the other hand is more common, it is very clear and durable and has high melting point. In the DUNIN glass product range we have classical quartz and sodium glasses, mirrored mosaics and tiles with vitreous coating, so as layered glasses. They vary from solid printed to brocade layered, from painted to metallic salted.

DE

Glas ist ein aus Reflexion, Licht-Brechung und Transmission bekanntes Material. Die älteste Form des Glases ist das „Silikat-Glas“, dessen Hauptbestandteil Silikat (Kieselsäure und Quarz) ist, also ein Grundbestandteil des Sandes. Die zweite am häufigsten verwendete Art vom Glas ist das Kalk-Natron-Glas. Es zeichnet sich durch Reinheit, Beständigkeit sowie einen hohen Schmelzpunkt aus. Die DUNIN Glas-kollektion besteht aus klassischen Quarz-, sowie Kalk-Natron-Gläsern und beinhaltet u.a. Spiegelmosaiken, Glasmosaiken aus gefärbter Glasmasse sowie von unten bemalte Glasfliesen.

FR

Le verre est un matériau surtout connu pour sa parfaite transparence, la réflexion et la réfraction de la lumière. Historiquement, les plus anciens types de verre sont des "verres" à base de silicate (dioxyde de silicium, ou en quartz), le constituant principal du sable. Le verre de sodium d'autre part est plus fréquent, très claire et durable et a un point de fusion élevé. La collection de verre DUNIN consiste de produits classiques de quartz et de verre de soude. Ceux-ci comprennent des mosaïques en miroir, en verre teinté et des plaques de verre revêtues du fond.

IT

Il vetro è un materiale conosciuto per le sue proprietà di trasparenza, luminosità e rifrazione della luce. Storicamente, i vetri più antichi erano "vetri silicici", cioè a base di silicio (diossido di silicio, o quarzo), l'ingrediente principale della comune sabbia. Oggi sono comuni anche i vetri al sodio, che hanno come caratteristiche principali la trasparenza, la resistenza e l'elevato punto di fusione. Tra i prodotti in vetro DUNIN troviamo i classici vetri al quarzo e al sodio, oltre che i mosaici a specchio e le piastrelle con rivestimenti vitrei a strati. I prodotti variano dal vetro stampato solido al broccato a strati, dal vetro dipinto al vetro rivestito in metallo.

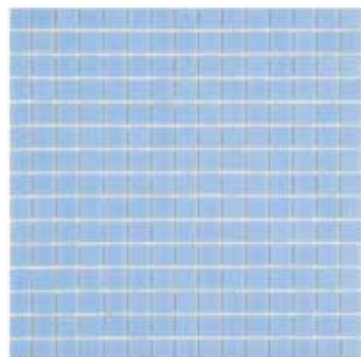

PL

Szkło to materiał głównie znany z doskonałego odbicia, załamania oraz transmisji światła. Najstarszym typem szkła jest „szkło krzemianowe”, którego głównym komponentem jest krzemionka (dwutlenek krzemu i kwarc) czyli podstawowy składnik piasku. Drugim powszechnie stosowanym szkłem jest szkło sodowe, które jest czyste, wytrzymałe oraz posiada wysoką temperaturę topnienia. W szklanej kolekcji DUNIN dostępne są klasyczne produkty kwarcowe oraz szkło sodowe. Są to między innymi mozaiki lustrzane, mozaiki barwione w masie oraz płytki szklane malowane od spodu.

CZ

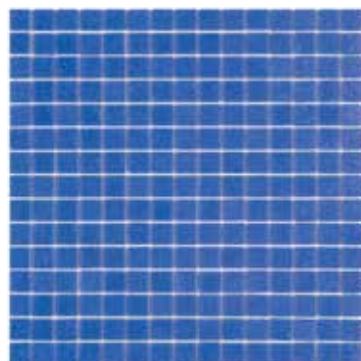

Sklo je známe svým přenosem, odrazem nebo lámaním světla. Nejstarším typem skla je „křemičité sklo“, kterého základem kyslíčník křemičitý, hlavní složka písku. Druhým všeobecně užívaným druhem skla je „sodíkové sklo“, které je čisté, trváci a odolné vysokým teplotám. Skleněná kolekce DUNIN obsahuje produkty z obou druhů skla. Existují různé mozaiky zrcadlové, barvené v plné hroubce, nebo skleněné platně barvené zespoda.
